EXPERIENCE

LayerZero — Software Engineer (Protocol & FDE)

Nov 2025 → present

Industry standard for cross-chain asset movement. Issuers use LayerZero to deploy, expand, and connect assets to the world's most utilized blockchains.

- We deploy and manage partner infrastructure — Stripe (Bridge & Tempo), Tether, PayPal, Wyoming, and more
- Deploying core protocol contracts for Stargate, custom OFTs and Console
- Contributing to the durable backend tooling framework for deploying, configuring, and building transactions (Temporal, AWS)

Mantle — Software Engineer (Product & DevRel)

Mar 2023 → Oct 2025

L2 built for financial applications. Also incubate products like mETH, FBTC, and UR.

- Mantle Network: testnet → mainnet, \$0 → \$2B TVL
- Led DevEx and DevSuccess across product, infra, and engineering — Rewards Station (Rainbow → Privy), Refuel (Stargate → Omni), docs (GitBook → Mintlify), faucet, Builders Hub
- Supported founders via hackathons, grants, and residencies

Sozu Haus

Builder / founder residency program supporting teams building from 1 → 100.

- Editions: Bangkok, Denver, Mallorca, Cannes
- Hosted and supported >200 builders, including pump.fun, funny.money, berry, peanut, clave, exo labs

Boys — Founding Engineer

Co-built two experimental products with petravoice, alongside one of the founding engineers of pump.fun.

- Boys NFT collection — minted out in 10 minutes. ~110k MNT collected, ~250k MNT volume. (announcement)
- Just a Boy — largest mint on Mantle: 652,155 mints, ~500k txs, ~10k unique holders. Privy + custom gas abstraction. (announcement, post-mortem)

SIR Trading — Software Engineer

Solving leverage without liquidation, funding, or decay. Fees only on mint and burn.

- Contributed to backend platform (contracts)
- Built auth module from scratch
- Built the staking page

Crystalize — Software Engineer (Intern)

First position in tech. Learned a lot, and it led me to meet @dcbuilder, @0xveer, and @doctorgm. Wouldn't be the same without them.
